Points to Ponder

The background	A decade of research has led to KP Graphs as a means of predicting the intraday flow or movement of the Index. The actual proof of our efforts is available in the form of historical intraday KP Graphs and monthly KP Graphs for the years 2007 to 2014.
Analyse	The minimum requirement for anyone to predict the index or scrips is the ability to analyse and understand simple mathametics of interaction between numbers allocated to different colour Lines.
Sentiment	KP Graphs with its coloured Lines depicts the sentiment of the Index or the Scrip. If the sentiment can be analysed correctly by anyone from our historical Graphs then you will have no hesitation in exploring options for the usage of our KP Graphs.
Assistance	We can assist you in explaining how to read the sentiment ahead of time and always try to be in the direction of the sentiment. The uncertanty of the stock market is certain but you can read it ahead of time due to our KP Graphs.
Turning Points	Intraday turning points can be easily explained and analysed by training which could be a beginning towards our interaction with you.
About Graphs	In order to draw a graph we need variables, one for the x-axis and one for the y-axis at the minimum. Date and or Time is on the X-Axis whereas the power of planet is shown on the Y-Axis.
Planets Used	Moon indicates the sentiment and is relatively fast moving so we prefer to track moon for intraday movement of the index. Sun moves one degree per day and hence is usefull to understand the outcome over more number of days and is used in our monthly KP Graphs. Moon moves approximately 12 degrees in a day.
Time Division	The Intraday movement of Moon needs to be translated in terms of power over a period of 24 hours or 1440 minutes. Astrology is used for time division and the method used is Vimshottari Dasha padhatti.
Zodiac and the Levels	The planet ie. **L1** is said to move in the 12 signs in the zodiac and the owner of each such sign is **L2** in our graphs. The 12 signs in turn have 27 Stars or Nakshatra's allocated to them. In simple terms each Sign is allocated 2-1/4 stars. The star in each sign is our **L3** Level. Each star is further divided into 9 parts which are our **L4** Levels.
The Power	The time division method allows L1 to interact with L2 for a finite time and since L3 is a time divided part of L2 the ineracton of L2 and L3 occurs. Similar interaction occurs between L3 and L4 and likewise between L4 and L5. We have a proprietory method of computing power for each level and then defining the rules of interaction of such powers.
